

Pegler Yorkshire

HOW PEGLER YORKSHIRE
HELPS TO SAVE ENERGY,
REDUCE COSTS AND
RESPECT THE ENVIRONMENT

Pegler Yorkshire *Unrivalled quality, innovation, customer service and long-term value for money*

As part of the global Aalberts Industries NV Group, Pegler Yorkshire is one of Britain's largest and most respected manufacturers of innovative products for the demanding and diverse plumbing and heating industries.

Pegler Yorkshire – a unique story

It was in the late 19th century when two separate and altruistic companies set out on the long road to satisfying the needs of prospective customers and, of course, to profit in the process. Coincidentally located just 30 miles apart, each was driven by the same vision and ideals of a no-compromise culture.

These two companies were Pegler and Yorkshire Fittings and in 2007 these two like minds came together as Pegler Yorkshire – a single source of proven, flow control solutions for installers, specifiers and engineers in the domestic, public and commercial markets.

Reputable and established brands

The very extensive Pegler Yorkshire product range comprises more than 15,000 lines – without rival for the choice and coverage it offers and for the number and scope of applications it satisfies, in many cases as market leaders in their respective categories.

A mind for innovation

Pegler Yorkshire's no-compromise philosophy will always put new product development high on the agenda, based on not only meeting the needs of today's markets, but also anticipating and meeting customers' future needs.

The true value of knowledge

As well as the benefit of unparalleled experience of the flow control market and its growth over many decades, Pegler Yorkshire has strong associations with major industry bodies such as those responsible for determining product and performance standards.

A charter for the best in customer service

With such a diverse product range and customer base, Pegler Yorkshire's no-compromise standards of quality, reliability and value for money go hand in hand with the principle of delivering the best in customer service.

Standards

Pegler Yorkshire is dedicated to designing, developing and manufacturing products of the highest quality. We are members of numerous standards committees and take an active part in their development. Our products, where applicable, comply with the relevant British, European and International standards.

PEGLER YORKSHIRE: 0 ENVIRONMENTAL CONT

The challenges facing the future...

...are huge when it concerns the efficient, energy-saving and economical running of energy systems in building services technology.

It is no longer exclusively a matter of saving energy. The demand for comfort and security is increasing and conversely energy consumption should decrease.

This means that producers and planners are continually faced with new responsibilities which are to be solved in a future-oriented and sustainable manner.

Whether building contractors, planners or installers - this concerns everyone!

As soon as it is a question of complying with environmental and energy regulations and its implementation, all partners are faced with similar challenges.

Especially important are therefore overall package solutions which offer maximum benefits through the latest technologies to all involved parties.

What does energy efficiency actually mean?

The benchmark for energy efficiency is the optimal utilisation of energy input. Maximum energy efficiency means: optimal use with the least possible energy input.

However, in the long run, energy efficient systems can only be successful if every application of unnecessary energy consumption is avoided.

It is therefore vital to optimize the energy efficiency of a plant without limiting its productive capacity.

OUR CONTRIBUTION

Pegler Yorkshire

Green awareness and responsibilities

Developing products which reduce the carbon footprint by saving water and energy is only one side of the green issues coin. Pegler Yorkshire is also increasingly committed to recycling key production materials (such as brass), eliminating the need for excessive packaging wherever possible, and looking for new ways in which the company's day-to-day operations can be improved to reduce waste and minimise the impact on the environment. Likewise, social responsibilities such as supporting employee and local community welfare are aspects of the very fabric and philosophy upon which Pegler Yorkshire was founded.

Reducing operating costs through tried and tested technology

ee-flow-control operates according to the dual principal: product selection and intelligent technology. The ee-select label, for example, guarantees that only products which prescribe to the latest technology and have the greatest energy efficiency are used during the installation process.

Protect the environment - save resources

The objective is to save energy and to deploy energy efficiently. ee-flow-control systems are the result of innovative ideas and actions. Systems in which the focus is placed on energy savings and energy efficiency - for the benefit of people and for safeguarding our environment.

Saving energy, saving water. How Pegler approach is working for the environment

Rhetoric, theory and good intentions are all very well – but what about the practicalities of applying new energy-saving and water-saving products and technology in the real world, on a day-by-day basis in typical domestic, public and commercial installations?

The Pegler Yorkshire range offers you an increasing number and diverse choice of such solutions, some of which are highlighted here. Although tried, tested and proven, each and every solution is constantly under scrutiny in the quest for improved performance, further savings and greater environmental and customer benefits – as, of course, is the long-established Pegler Yorkshire way.

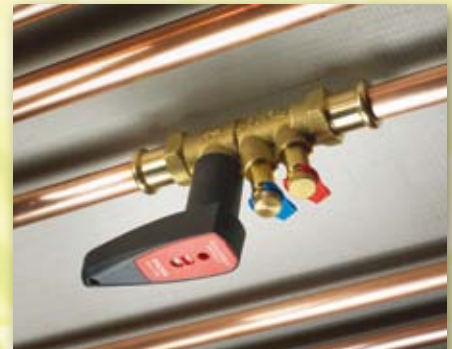

i-temp terrier Programmable radiator controls

The Terrier i-temp programmable thermostatic radiator valve takes room and zone temperature control to a new level. The Terrier i-temp not only controls the radiator temperature but also controls its on/off times independent of the heating source.

terrier Thermostatic radiator valves

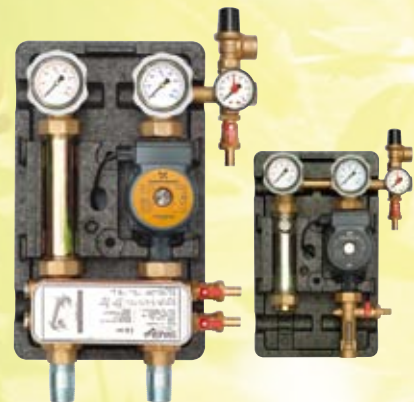

Thermostatic radiator valves provide individual radiator temperature control independent of the heating source – boiler or heat pump. This helps to reduce the wasteful use of energy at times when the room's ambient temperature doesn't require additional heat or at times when the property is empty.

PEGLER Commissioning valves

Venturi Commissioning and Double Regulating Valves provide system balancing and offer accurate control of commercial HEVAC systems to maximise their operating efficiency.

meibes Solar pump stations

The comprehensive Meibes range is designed to ensure the optimum performance of solar thermal systems and is compatible with all types of solar collectors and solar cylinders.

ECO-FACT
The average U.K. household creates around 5½ tonnes of CO₂ each year.

Pegler Yorkshire

PRESTEX Thermostatic mixing valves

The Prestex In-line mixing valves are designed to eliminate the risk of scalding and are suitable for a wide range of applications where temperature regulation is essential.

francis pegler Concealed bathroom frames

In addition to offering aesthetically-pleasing solutions for bathrooms, washrooms and cloakrooms, concealed bathroom frames provide a water-saving, dual-flush system which features a 4/2.6 litre flush as standard.

PERFORMA

Water saving taps and mixers

(Clockwise) Eco taps, electronic taps and non-concussive taps

The Performa range includes a number of taps and mixers which are available for water saving applications. These can reduce water to 4 litres per minute compared to their standard flow equivalents. Flow restrictors are available for use with other products in the Performa range.

meibes

Thermal interface units

An ideal solution for district heating schemes, thermal interface units offer a high efficiency heating and hot water solution which reduces both energy usage and carbon emissions.

Recycling - cutting costs and saving our resources.

At Pegler Yorkshire we fully understand the importance of efficiency in the manufacturing process – not only can we cut our costs by being exceptionally efficient but we can contribute to a cleaner environment too.

That's why at least 80% of our process waste is recycled - and we actually source raw materials from recycled waste streams. We also:

- *Monitor and measure the carbon footprint of our manufacturing base*
- *Have energy champions based at our manufacturing sites*
- *Run energy / carbon footprint reduction programs - lighting, heating and process hibernation*
- *Maintain this common policy across all sites world wide*

Pegler Yorkshire are certified as compliant under the Producer Responsibility Obligations (Packaging Waste) Regulations and have also attained ISO 14001 Environmental Certification for the Manufacturing and test of non-ferrous plumbing products.

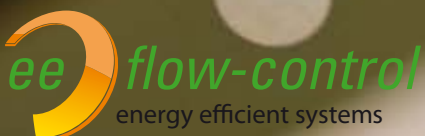

ECO-FACT
Over 96% of Pegler Yorkshire packaging is recyclable

Pegler Yorkshire

ECO-FACT
Every year Pegler
Yorkshire re-cycles
6,000 tonnes of Brass
